Associate Director

PPLI Strategy & Pricing | Python & ML Engineering | Bridging Finance, Data, and AI

Combines deep financial expertise with hands-on engineering capability. Over a decade of specialization in Private Placement Life Insurance (PPLI) and recognized within one of the top PPLI brokerage firms as the technical architect of its core analytical infrastructure.

- **Built the firm's Python-based PPLI pricing engine into a single automated pipeline**, integrating carrier mechanics, reinsurer pricing, federal and state insurance law, and machine learning models trained on thousands of carrier illustrations to reverse-engineer market pricing dynamics and IRS limit calculations.
- **Combines the modelling depth of a financial analyst with the engineering instincts to build, deploy, and own production systems**; a CFA Charterholder completing an M.S. in Data Science (2026) with applied research in geospatial ML and time-series econometrics.

Expertise

Python / R / SQL / Excel VBA / Process Automation / Machine Learning / Predictive Modeling / API integration / PyTorch / Geospatial Analysis (rasterstats, geopandas) / Cloud Infrastructure / AWS Textract / Railway / PPLI Structuring / Insurance-Dedicated Funds (IDFs) / Alternative Asset Management / Estate Planning / Insurance Tax Law / Cross-Functional Collaboration / Stakeholder Management / Staff Development

Relevant Professional Experience

Associate Director

Jan 2024 – Present

Winged Keel Group

Remote | Portland, OR | New York City, NY

Structures the firm's largest and most complex PPLI cases, managing cross-party timelines for fund approvals, coordinating the implementation of market max portfolios for family offices, and specializing in the restructuring of highly complex policies with significant legal and tax risk. Simultaneously serves as the firm's primary technical contributor, building the analytical, AI-integrated infrastructure that underpins firm-wide operations.

- **Python Pricing Engine:** Built the firm's end-to-end PPLI pricing engine in Python from the ground up, integrating carrier and reinsurer pricing mechanics, PPLI structure, and federal and state tax law into a single automated pipeline; connected to firm and wirehouse PowerPoint templates; deployed via the firm's AI chat interface for production use by the full team.
- **Machine Learning:** Applied machine learning to decode carrier mortality pricing and IRS tax limits—values originally derived by actuarial teams—by training models on thousands of insurance illustrations. Models dynamically adjust estimates based on case-specific profile and deposit size, enabling rapid and accurate pricing without manual pricing runs and pitch deck creation.
- **Template Governance:** Owns template creation, governance, and training across the firm. Responsible for maintaining analytical accuracy and technical consistency across all client-facing materials.

Senior Associate

Jan 2022 – Dec 2023

Winged Keel Group

Remote | Portland, OR | New York City, NY

Subject matter expert for PPLI as an alternative asset tax-wrapper within UHNW investment portfolios. Served as dedicated analyst for the firm's largest asset manager relationship. Designed and structured portfolios for a substantial book of UHNW clients with significant total committed investment. Rebuilt manual workflows with Excel VBA automation.

- **Process Automation:** Automated the firm's marketing material production using Excel VBA, replacing manual copy-paste workflow with a single template that runs full analyses, generates all footnotes, supports direct PDF export, and propagates changes firm-wide, delivering meaningful cost savings.
- **Enhanced first compelling comprehensive industry-wide fund report of Insurance-Dedicated Funds (IDFs):** Partnered with the distribution team to support major fund closes and created report templates to monitor the IDF & SMA markets, highlighting funds with high performance, Sharpe ratios, or client allocations; drove growth of PP policies administered by the firm.

Associate

Jul 2017 – Dec 2021

Winged Keel Group

New York City, NY

Produced financial models and actuarial risk analyses enabling client investment decisions on large-scale traditional insurance cases and institutional PPLI deposits.

- **Primary analyst for the firm's largest Private Equity client:** Built portfolios for a significant number of major domestic and foreign client investments and hedged mortality risk on large PE investment portfolios through advanced actuarial risk analysis and cross-company collaboration.
- **Delivered material reductions in annual premium payments for UHNW families** through portfolio restructuring while realigning product mix to wealth transfer objectives. Increased total coverage, reduced annual premiums, eliminated material tax risk, and improved portfolio IRR at life expectancy by as much as 50 basis points.

Projects

Oregon Wine & Climate Database

Jan 2026 – Present

Co-developing a first-of-its-kind unified dataset connecting Oregon wine production, pricing, and climate data from 1981 to 2024, filling a gap left when the USDA discontinued state-level wine data collection for all states outside California and Washington in 2011.

- Built data pipeline ingesting scanned historical PDFs (AWS Textract), modern PDFs (pdfplumber), USDA NASS API, and PRISM climate data; hosted on PostgreSQL (Railway) with a FastAPI REST layer.
- Time-series panel regression at the wine region by varietal level to estimate fixed effects of climate aggregates on production and pricing; ML models to predict production by phenological stage and project how production variability flows through to pricing under climate scenarios.
- Interactive dashboard comparing production, pricing, and climate trends across Oregon, California, and Washington AVAs by varietal. Designed for future public release.

Professional Qualifications

M.S. Data Science, Willamette University, Aug 2026

CFA Charterholder, CFA Institute, 2022
